Windy Corner lay, not on the summit of the ridge, but a few hundred feet down the southern slope, at the springing of one of the great buttresses that supported the hill. On either side of it was a shallow ravine, filled with ferns and pine-trees, and down the ravine on the left ran the highway into the Weald.

Although newspapers today are better printed than ever, legibility continues to be vital because of the added pressure of time on readers' attention from other media. But even if there's less time for the paper, readers still tend to want more information, rather than less. And even with less time for the paper, most readers seem to be reading *just as much as before. Probably they read faster than in the past by reading more selectively, by skimming or by skipping over parts of the text, and so on.*
